Agate is a banded form of finely-grained microcrystalline quartz. The brilliant color patterns and banding make this translucent gemstone very unique. Agates have many distinctive styles and patterns, but each agate is unique. No two agates are the same.

C6 Unicorn Aura Quartz

Unicorn Aura Quartz

Quartz includes a variety of stones, colorless quartz, or crystal quartz, is the most common. The word "CRYSTAL" comes from the Greek word for "ICE" and was believed to be eternally frozen. The single quartz crystal is a six-sided prism; however, this is not always how it is formed. Sometimes it is found in veins, seams, or pockets of rock. It is popular for carving objects and making crystal balls. This quartz has been treated with an aura coating which results in a shimmering, iridescent effect. Quartz is also used for optical and technical purposes, but only 99% is pure enough to use for this purpose. The major supplier of crystal quartz is Brazil, but is found abundantly throughout the world, including the United States. SIO
